

# Digital.ai Intelligence – Plan & Create Lens

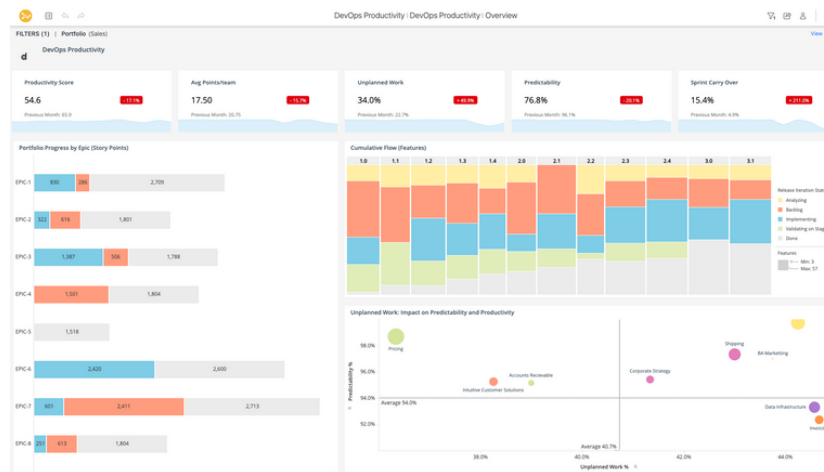

Identify application development bottlenecks, optimize cycle time, and deliver value.

The Plan & Create Lens is an enterprise-grade, cloud analytics product that provides pre-configured dashboards with hundreds of curated data-driven insights from product portfolios, program increments and sprints, and resource distribution. It helps you prioritize strategic portfolios, identify possible risks of application delivery delays and increase teams' efficiency, so you can focus on what is critical to delivering value.

Unlike other dashboards products, Digital.ai Plan and Create Lens include out-of-the-box integration connectors with various vendor products<sup>1</sup> and allow you to plug any additional data into the platform anytime.

## Plan & Create Analytics Lens

Manage your product portfolio, spot application development risks early on, and effectively coordinate execution with a unified view across the product portfolio and application delivery.

## Digital.ai Plan & Create Lens Key Metrics

Plan & Create lens correlates data from nearly all best-of-breed enterprise planning solutions, including product portfolio management (Clarity PPM, Micro Focus PPM, Planview), agile planning and work management tracking tools (Digital.ai Agility, Atlassian Jira Software, Azure DevOps, Smartsheet), and many others. Sample analysis that can be performed with this lens include:

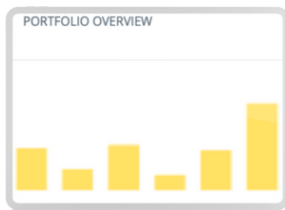

- **Sprint Analysis** – Monitor key performance factors like team workload balance, time to resolve known issues, and overall efficiency trends.
- **Project Backlog** – Make managing backlog items easier by indicating status, age, and current team progress.
- **Portfolio Management and Program Increment** – Set performance goals and seek faster velocity while observing progress across different feature teams while highlighting opportunities to improve.

## Expanded Plan & Create Lens Capabilities

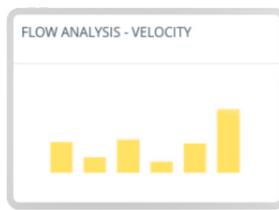

|                            |  |
|----------------------------|--|
| Integration Marketplace    | Out-of-the-box plugins to leading application development and DevOps tools.          |
| Domain Specific Dashboards | Dozens of pre-configured, ready-to-use dashboards and curated insight metrics.       |
| Cloud Datalake             | Integrated data from multiple sources, normalized and available in a cloud datalake. |
| Flexible Platform (BYOM)   | Build your own metrics and dashboards to support your business needs.                |

## Plan & Create Dashboards Sample

### Portfolio Overview

It helps you prioritize product delivery aligned with business strategy.

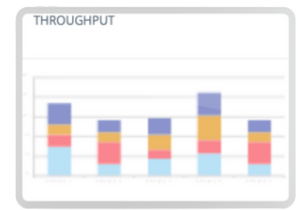

### Flow Analysis - Velocity

It helps you manage release train velocity and trends.

### Resource Management

It helps you effectively coordinate execution and remove risks.

### Throughput

It helps you track features, epics, and stories from planning to production.

## Intelligence AI-Powered Analytics Add-On

Intelligence Plan & Create Lens is your first step towards AI-Machine Learning for software delivery lifecycle (SDLC) predictability. The Intelligence Flow package enables augmented data-driven decisions for Product Portfolio Management and Application Delivery.

### Intelligence Flow Acceleration
