

Do DevOps and continuous delivery right with Digital.ai Release

Looking for a way to ship software faster while managing the complexity and risks that come with digital transformation efforts?

Is your software release process plagued by unnecessary delays, failures and manual coordination efforts?

Digital.ai Release helps you manage complexity, accelerate delivery speed, while reducing risk and increasing visibility to drive digital transformation success.

Digital.ai Release, formerly XebiaLabs XL Release, is a market-leading release management and orchestration solution that enables teams across an organization to collaborate to achieve software delivery success. It is designed to help you manage the increasing complexity of your software delivery processes by easily integrating with your existing DevOps tools and then modeling your processes end to end. You can accelerate software delivery while reducing risk using release process automation that maps and standardizes your processes. And it comes with built-in reports, data analytics, and customizable dashboards that provide visibility of what's happening across the release pipeline to drive and support your transformation efforts.

Key Benefits

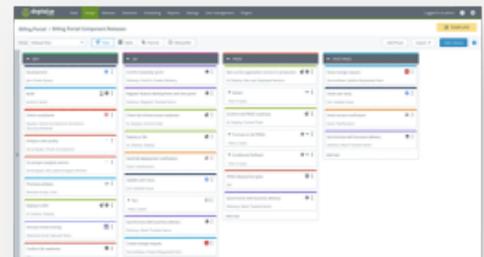

Manage complexity. Digital.ai Release helps you model and visualize even the most complex release processes, visualizing everything from a single view for improved management, tracking and optimization. Our out-of-the-box plugins seamlessly integrate with all of your existing DevOps tools and systems, making it fast and easy to get your existing release processes defined and managed. A single tool captures and consolidates all of the data, providing all stakeholders with a single view and the same same set of information to work from, ensuring consistency while improving collaboration across teams.

Accelerate delivery and reduce risk. You can promote best practices and consistency across the organization, even when using disparate tools, by using our release templates to model diverse processes, ensure compliance across teams, and make releases more repeatable and predictable. Whether your processes are fully automated or require hands-on oversight, you can track all of your releases, automate manual processes to reduce errors, improve stability and accelerate delivery. Digital.ai Release assesses the risk of failure for each of your releases and alerts those involved, so they can quickly identify and fix the issues before they get into production.

Increase visibility to drive transformation. Fully customizable dashboards improve visibility across your applications and environments by providing a single pane of glass for all of your DevOps tools, giving a complete picture of what is happening across your releases. Identify areas of improvement using data analytics and comprehensive reports with multiple levels of granularity, so teams can pinpoint inefficiencies and make data-driven decisions with the most impact. With single-click audit reports, you can prove end-to-end compliance, making IT audits faster, more accurate, and less painful for your entire organization.

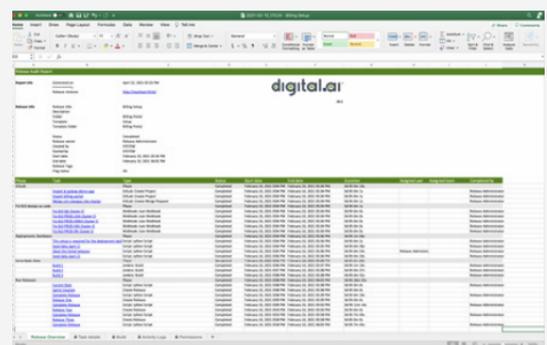

Digital.ai Release Dashboard

Release Pipeline

Analytics Lens Dashboards

Out-of-the-box Audit Reports

Key Features

Complex pipeline orchestration

Manual and automated task orchestration gives you complete control over your entire software release process.

Standardized templates

Control high-level delivery flows and enforce required process steps while providing the flexibility for teams to use the DevOps tools they know and love.

Release automation

Automate manual tasks to accelerate your delivery process and reduce risk.

Out-of-the-box integration

Easily integrate with the existing tools in your environment like Jenkins, Ansible, Git, Atlassian Jira, ServiceNow, Digital.ai Agility, Digital.ai Continuous Testing, and hundreds more.

Dependency management

Manage dependencies within and across multiple release pipelines, increasing the reliability and stability of complex software delivery processes.

Single pane of glass

Improve collaboration with a single view that provides the same data and insights to everyone involved in making the release process.

Customizable dashboards

Views built around your organization's release processes help pinpoint pipeline bottlenecks, uncover opportunities for automation, and make decisions that will reduce time to market.

Audit & compliance

Automated reports gather evidence and provide a full audit trail for provable compliance, freeing teams to deliver software instead of spending time collecting and compiling data.

About Digital.ai

Digital.ai enables enterprises to focus on outcomes instead of outputs, create greater business value faster, and deliver secure digital experiences their customers trust. The Digital.ai Value Stream Platform seamlessly integrates all the disparate tools and processes across the various value streams, uses data and AI/ML to create connective tissue between them, and provides the real-time, contextual insights required to drive and sustain successful digital transformation. With Digital.ai, enterprises have the visibility they've been seeking to deliver value, drive growth, increase profitability, reduce security risk, and improve customer experience.
