

Deploy Pro Jumpstart

Services Fact Sheet

Deploy Pro Jumpstart

Adopting deployment automation solution enables development teams to model software deployment processes across the enterprise centrally. Adoption typically requires integration with a complex ecosystem of management systems in addition to process alignment across a diverse set of stakeholders. Digital.ai's Deploy Pro Jumpstart service is designed to help Digital.ai customers through this process of first adoption and onboarding onto the Deploy solution. This service helps customers effectively implement the application components, build integrations, and organize and model their processes by following a structured four-phase implementation and adoption process.

Strategy	Design	Implement	Adopt
Digital.ai consultants will guide you to develop a Deployment Automation strategy that aligns to enterprise goals and effectively manages your Deployment processes.	As part of the Design Phase, the defined strategy will be used to design a Deploy infrastructure, find a set of pilot deployment tasks, and define a security model.	Deploy Pro Jumpstart includes the implementation of the Deploy solution and engaging with a first set of software development teams to model their deployment tasks. These first deployment tasks supply a quick win and lay the foundation for further adoption.	Enablement of the organization is critical to further adoption of the Deploy solution. Every engagement includes enablement of the DevOps team and collaboration on a blueprint for further adoption

Digital.ai's Deploy Pro Jumpstart service helps you quickly adopt the Deploy solution and start realizing value from your investment. This service supplies a Digital.ai DevOps Consultant as a partner to supply guidance and best practices, execute a proven path to success, and reduce the time to adoption, all resulting in a shorter time to value realization.

When is it right for you

The best time to use Digital.ai's Deploy Pro Jumpstart service is when a decision has been made to invest in Digital.ai's Deploy solution. The Digital.ai Consulting team will help your organization get "out of the gate" quickly and begin realizing value as soon as possible.

Key components

What to expect during your engagement

When you engage Digital.ai Professional Services for a Deploy Pro Jumpstart package, Digital.ai consultants will drive and support the following work scope of work:

- A Digital.ai DevOps consultant to define and execute a strategy to implement the Deploy solution.
- A Design Workshop to review the goals of the Deploy solution and define success criteria.
- A Design Document detailing high level infrastructure design, security, deployment organization and access control, and initial deployment tasks designs. The design document will also define decisions for key best practice areas such as:

1. Business Continuity Strategy	3. Plugin Maintenance Policy	5. Security Policies
2. Data Retention Policy	4. Template Management	6. Upgrade Policy
- Deployment Automation Implementation – Digital.ai consultants will collaborate with customers to design and implement a set of first deployment applications.
- An adoption strategy blueprint that will outline a go-forward plan for how to drive organizational adoption of the Deploy solution after the completion of the Jumpstart services.

These work packages are delivered through a series of workshops and hands-on sessions with the customer team(s).

What you need to get started:

To get the most out of your Deploy Pro Jumpstart engagement, customers are encouraged to have:

- A Project Team, including a Sponsor, Project Manager, Product Owner, and Implementation engineers
- Prepared a set of Deployment scenarios and requirements to be supported
- A list of all third-party systems and versions to be integrated
- A plan to mobilize or request support and inputs from other departments and teams (e.g., security, infrastructure, production teams, etc.)

Why choose Digital.ai?

Digital.ai consultants know the best practices that allow an implementation to be successful. Here are a few of the benefits of working with Digital.ai for your first implementation:

Feature	Benefit
Access to Digital.ai Consultants	<ul style="list-style-type: none"> Named consultant engaged throughout the Deploy Pro Jumpstart Take advantage of extensive experience and working knowledge of best practices Avoid common failure-to-launch challenges
Comprehensive Process	<ul style="list-style-type: none"> The thorough approach aligns the design and implementation process to corporate goals and returns real value quickly Proven, successful approach to adoption Avoid common implementation mistakes
Deployment Automation Development	<ul style="list-style-type: none"> Quick win to get real deployment tasks implemented Demonstration deployment tasks that can be referenced in future deployment task automation development Effective team enablement

Ordering information

The services can be ordered using the part numbers listed in the table below. An Order Form will be written identifying the services purchased and defining the scope of services to be performed.

Title	Model number	Description
Deploy Pro Jumpstart	SET-DEVOPS-DEPLOY	Digital.ai consultant(s) to engage and coach customer stakeholders through the implementation and adoption of the Deploy solution.

About Digital.ai

Digital.ai is an industry-leading technology company dedicated to helping Global 5000 enterprises achieve digital transformation goals. The company's AI-powered DevOps platform unifies, secures, and generates predictive insights across the software lifecycle. Digital.ai empowers organizations to scale software development teams, continuously deliver software with greater quality and security while uncovering new market opportunities and enhancing business value through smarter software investments.
